Summary

Detail-oriented AI/ML Engineer with hands-on experience at Nokia in data validation, workflow automation, and Python-based analysis. Skilled in SQL, Python, and spreadsheet tools, with a strong track record of assessing large datasets for accuracy, uncovering patterns, and translating findings into actionable insights. Fast learner who communicates clearly, adapts quickly to new tools and documentation, and enjoys solving ambiguous, real-world problems independently and in team settings.

Education

B.E. in Artificial Intelligence & Machine Learning | CGPA: 9.43

Bengaluru, Karnataka

New Horizon College of Engineering | 2026

Experience

Nokia — Student Intern

Aug 2025 – July 2026

- Assessed and validated 500+ pages of technical documentation for accuracy, building a Python automation tool that reduced validation time by approximately 90% and cut down anomalies and errors.
- Analyzed recurring error patterns across hundreds of documents to design automated validation workflows, processing the full document set in under 60 seconds.
- Partnered with 3+ R&D and QA teams in an Agile environment, using Git for version control and clear documentation to share findings and knowledge across teams.
- Debugged and optimized data workflows based on identified anomalies, improving tool reliability and reducing validation failures across 500+ pages of documentation.

Projects

CyberShield AI – AI-Powered Cyber Threat Intelligence Platform (Data Pipeline | Analytics) | [GitHub](#)

- Architecture:** Built a full-stack data platform with 30+ REST APIs using FastAPI, React, PostgreSQL, Docker, and JWT to organize and serve large-scale datasets.
- Data Analysis:** Engineered a retrieval and analysis pipeline over 15K+ documents using SQL-backed storage, embeddings, and pattern matching, achieving 90% retrieval and 95% detection accuracy.
- Impact:** Distilled complex datasets into actionable takeaways, reducing vulnerability triage time by 75%, security analysis effort by 80%, and improving reporting efficiency by 60%.

AI Job Application Copilot (Multi-Agent | Data Analysis | ML)

- System Design:** Designed a 5-agent workflow with FastAPI, React, PostgreSQL, Docker, and AWS to organize, query, and analyze structured application data.
- Data & Patterns:** Combined SQL/BM25 retrieval with XGBoost pattern analysis over 5K+ job descriptions, attaining 92% retrieval and 88% matching accuracy with sub-2-second response time.
- Outcome:** Distilled large volumes of unstructured data into clear, actionable recommendations, reducing resume screening and interview preparation effort by 80%.

AI Attendance System (Computer Vision | Data Accuracy)

- Built a data-accuracy-focused attendance system using OpenCV, DeepFace, and Tesseract OCR, achieving 95% face recognition accuracy.
- Developed a real-time data pipeline achieving 98% OCR accuracy, identifying anomalies and reducing manual attendance errors by 80%.

Skills

- Programming & Data:** Python, SQL, Pandas, NumPy, Data Analysis, Data Cleaning & Validation.
- Productivity Tools:** Google Workspace (Docs, Sheets, Gmail), Microsoft Excel, Git/GitHub.
- Analytics & ML:** Scikit-learn, TensorFlow, PyTorch, XGBoost, NLP, Computer Vision.
- Generative AI:** LLMs, Agentic AI, LangGraph, LangChain, Prompt Engineering, RAG.
- Backend & Cloud:** FastAPI, REST APIs, PostgreSQL, Docker, Kubernetes, AWS.
- Frontend:** React, Tailwind CSS.

Certifications, Courses & Workshops

- Computer Networks and Internet Protocols – NPTEL
- Data Fundamentals – IBM SkillsBuild
- MLOps Workshop – Kaushalya Technical Training

Extracurricular Activities

- Rubik's Cube Speedsolving — Sub-15 sec solves in competitive settings.
- National-Level Wrestler – Represented university, showcasing discipline and endurance.
- Powerlifting (Silver Medalist) – State-level champion with proven strength and consistency.
- National-Level Scout (Rashtrapati Puraskar) – Strengthened leadership, teamwork, and community service.
